

DESCRIPTION

PE-LT is a solvent-less, two component epoxy coating system, designed for low temperature applications. It exhibits very good appearance and physical properties. This system has the advantage of being fast curing at low temperature. It exhibits high mechanical strength and good resistance to organic acids.

ADVANTAGES

- Dense surface resistant to bacteria and moisture and easy to clean
- May apply several layers on itself
- Contains no solvent allowing for interior application without harmful odors
- Excellent adhesive properties, allowing application on other firm and hard coating, as well as a good bond to the substrate

TECHNICAL DATA

COLOR	PART A:UPON REQUEST	PART B:CLEAR TO AMBER	MIX:UPON REQUEST
RECOMMENDED THICKNESS	PRIMER (ECTR): 8 MILS (200 FT ² /GAL) FINISH COAT (ECTR-LT):16 MILS (100 FT ² /GAL)		
SHELF LIFE	12 MONTHS IN ORIGINAL UNOPENED FACTORY SEALED CONTAINERS. KEEP AWAY FROM EXTREME COLD, HEAT, OR MOISTURE. KEEP OUT OF DIRECT SUNLIGHT AND AWAY FROM FIRE HAZARDS.		
MIX RATIO, BY VOLUME	A:B = 3:1		
MIX RATIO, BY WEIGHT	A:B = 100:33		
POT LIFE (454 G)	10-15 MINUTES @ 25°C		

PROPERTIES @ 23°C (73°F) AND 50% R.H.

SOLIDS CONTENT, BY WEIGHT	100%		
SOLIDS CONTENT, BY VOLUME	100%		
DENSITY (KG/L)	PART A	PART B	MIX
	1.05-1.10	0.9-1.0	--
THINNER RECOMMENDED	XYLENE		
RECOAT WINDOW AT ROOM TEMPERATURE (25°C)	3-4 HOURS		
RECOAT WINDOW AT LOW TEMPERATURE (0-5°C)	4-8 HOURS		
PEDESTRIAN TRAFFIC	12-24 HOURS		
NORMAL TRAFFIC	24-48 HOURS		
HEAVY EQUIPMENT TRAFFIC	>48 HOURS		

Times are approximate and will be affected by changing ambient conditions, especially changes in temperature and relative humidity.

BOND RESISTANCE (PSI), ASTM D4541	>300 (SUBSTRATE RUPTURES)		
PERMEABILITY (%), ASTM D570	0.3 %		
VISCOSITY @ 25°C	PART A	PART B	MIX
	1000-1500	500-800	-
TENSILE STRENGTH (PSI), ASTM D638	12200		
COMPRESSIVE STRENGTH (PSI MPA), ASTM D695	1850		
ELONGATION %, ASTM D638	2.5		

Please note, that the indicated mileage is calculated for flat surfaces. A porous or imperfect surface will require more material in order to cover the same mileage.

SURFACE PREPARATION

OLD CONCRETE Concrete surface must be cleaned. BLASTRAC, sand blasting, diamond grinder w/30 grit or coarse, or water blasting is highly recommended to remove surface contaminants. Any oils and fats must be removed prior to product application. Acid etching may be required (followed by a thorough rinsing) to open the pores of the concrete to accept a primer. Do not apply to wet substrates. Chloride, moisture, and pH levels should be checked prior to application. In almost every application a primer is recommended prior to use of PE-LT.

NEW CONCRETE The concrete should be allowed to cure for a minimum of 30 days. Compression resistance of concrete must be at least 25 MPa (3625 lbs./inch²) after 28 days and traction resistance must be at least 1,5 MPa (218 lbs./inch²). BLASTRAC, sand blasting, diamond grinder w/30 grit or coarser or acid etching (followed by a thorough rinsing) is required to remove the surface laitance that appeared during the curing process. A primer should be used to reduce out-gassing and promote adhesion.

MIXING

Thoroughly mix each component separately. Pour component B into component A using the proper mixing ratio of 3A:1B by volume. Mix both components for maximum of 1 minute using a drill at low revolution (300 to 450 rpm) to reduce trapping of air. While mixing, scrape bottom and walls of container at least once to ensure a homogeneous mix. Only prepare quantity that may be applied during pot life of mixture.

APPLICATION

Apply mixed product on the prepared surface tightly (thin film) using a rubber rake and pass a roller to obtain a uniform coating. Avoid creating puddles.

CLEANING

Clean all tools and materials with the cleaner/thinner for epoxies. Wash hands and skin carefully with warm soapy water. Once product has hardened, it may only be removed through mechanical means.

RESTRICTIONS

- Minimum/Maximum temperature of substrate: 0°C / 30 °C (32 °F / 86 °F). There is a chance a blushing at 0°C (32 °F) temperatures or below.
- Maximum relative humidity during application and curing: 85 %.
- Substrate temperature must be 3 °C (5.5°F) above dew point measured.
- Humidity content of substrate must be < 4 % when coating is applied.
- Do not apply on porous surfaces where a transfer of humidity may occur during application.
- Avoid exterior use on substrates at ground level.
- Protect from humidity, condensation and contact with water during the 24 hour initial curing period.
- Surface may discolor in areas exposed to regular ultraviolet light.

HEALTH AND SAFETY

In case of skin contact, wash with water and soap. In case of eye contact, immediately rinse with water for at least 15 minutes. Consult with a doctor. For respiratory problems, transport victim to fresh air. Remove contaminated clothes and clean before reuse. For more information, consult the material safety data sheet.

Components A and B contain toxic ingredients. Prolonged contact of this product with the skin is susceptible to provoke an irritation. Avoid eye contact. Contact with may cause serious burns. Avoid breathing vapors release from this product. This product is a strong sensitizer. Wear safety glasses and chemical resistant gloves. A breathing apparatus filtering organic vapors approved by the NIOSH/MSHA is recommended. Predict suitable ventilation.

Consult the material safety data sheet for further information.
